Our project has two PCBs that must be manufactured: Front Panel and Load.

Front Panel PCB can have all default settings on JLCPCB. Preferably Black PCB color (only adds one day to production time with no extra cost) and no stencil is needed.

Load PCB MUST BE 2OZ COPPER THICKNESS. All other settings can be left as default, including green PCB color. The high cost of $41.10 is accounted for in our budget, and a stencil will be required for this PCB.
